

Agave 2.0 Update

November 2, 2007

Status Update

- Financials implemented as planned
 - Remaining project divided into 3 phases
 - Smaller, more manageable, deliverables
 - Logical groupings
 - Users will get to see and touch application sooner
 - Provides early signs of project's results
- 

Status Update

- Focused on data reconciliation
 - Judges' names - complete
 - Attorneys' names and firms- complete
 - Parties – in progress
 - Robert ≠ Bob
 - K. Kent ≠ Kent
 - Bruner ≠ Bruner, M.D.
- 

Status Update

How we got here

- Three separate systems/data bases
 - Clerk
 - Financial
 - Cactis
- Different interests, needs, operations,...

Status Update

● Party process

- Print out non-matched parties
 - Open Cactis & Agave
 - Search for case
 - Cactis = Fast, < 1 second
 - Agave = Too slow, *many* seconds, minutes in some cases
 - Retrieve documents for verification
 - Update either Cactis or Agave
- 

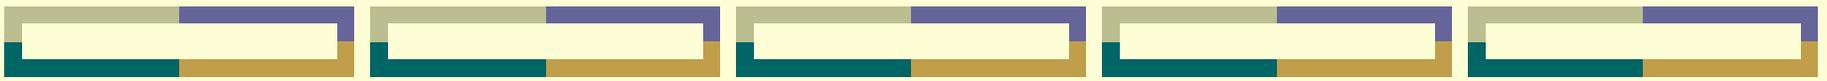

Status Update

- Agave 1.5 installed on all JAA's and in Case Management Services.
 - Used for document look up only
 - However, most of the JAA's use AgaveWeb for document searching due to slow search times of Agave.
 - Case Management Services is in the midst of data clean up and must use Agave.
 - Response time is hampering this effort
 - When fully deployed, the user community will not be satisfied with the time required to manage and process a case.
- 

Proposed Solution

- Alter project scope and timeline to allow for code optimization.
 - 90 day delay for re-programming and testing
 - Approximately \$80,000 in development cost to Pima County Superior Court
 - Not requesting additional State JCEF funds
- 

Benefits

- Case retrieval time enhanced at least 10X
 - 10 seconds today, 1 second after code optimization
 - Enhancing performance now will cost less in time and money than if we wait until after the release of Agave 2.0.
 - There is less code to change
 - Case Management Services will have more time to reconcile data.
 - Bench rotation scheduled for February will occur before implementation not during as currently planned.
- 

Approach

- Court staff will focus on optimization keeping knowledge in house
 - Optimization = quicker retrieval time, response time, and processing time
 - Consultants continue to work on new development
 - Start work mid-November
 - Users will see benefit in February
 - Agave 2.0 not in production
- 

Impact

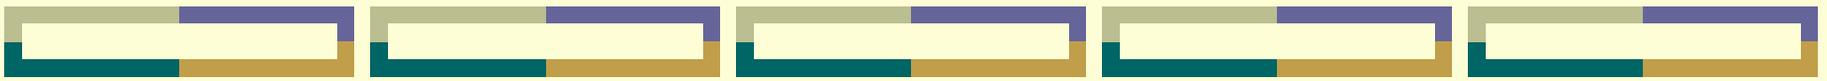

- Agave 3.0 will also be postponed by 3 months due to resource constraints
- Implementation begins Monday, April 28.

If we don't do this

- Usability and response time will negatively affect both Clerk and Court staff.
 - When Agave 2.0 is released the user community will be extremely unsatisfied with the application.
 - Acceptability of the benefits of this system will be negated.
- 

Agave 2.0

- A new timeline will be presented at the next CACC meeting.
